

ABSTRACT

Method of making a new dental prosthetic from an existing dental prosthetic including the steps of providing an existing dental prosthetic; and providing a mold having a bottom half and a top half, the bottom half including a side wall, a closed bottom and an open top face for mating with the top half, the top half including a further side wall, an open bottom face for mating with the open top face of the bottom half, and a partially opened top. The bottom half is then partially filled with a first molding material, and a first portion of the existing denture is covered with the first molding material. The top half of the mold is placed on the bottom half; and a portion of the first material and a further portion of the existing denture is covered with a second material.
